

Supplemental Material

Supplemental Material, Equation 1. Equation for the regional background concentration, $C_{bkg}(z)$, for the year 2000 at elevation z in meters above sea level, is expressed as the sum of the primary and secondary (nitrate, sulfate, and ammonium) background concentrations and the additional background for Southern Switzerland.

$$C_{bkg}(z) = C_{bkg}(0) \frac{a + \ln z}{a + \ln z_o} + \delta_1 \left(C_{Ticino}(0) \frac{\ln(\frac{z}{1200})}{\ln(\frac{z_{Ticino}}{1200})} \right) + \delta_2 C_{Sottoceneri}$$

Where $C_{bkg}(0) = 9.2282$, $a=-8.6146$, $z_o=440\text{m}$, $z_{Ticino}=200\text{m}$, δ_1 is unity for Southern Switzerland (Ticino including Lugano and Sottoceneri) at altitudes lower than 1200 m a.s.l. and zero elsewhere. $C_{Ticino}(0)=9.5$, δ_2 is unity for the Sottoceneri region and zero elsewhere, and $C_{Sottoceneri}=4.4$. The terrain height, z , in each grid cell, is averaged over a circle with a total area of 1 km^2 in Southern Switzerland and 5 km^2 elsewhere.

Supplemental Material, Table 1. Fixed monitoring sites used for model evaluation.
